Drs. Elvey, Kellogg, Porter and Wheelon

O. G. Villard, Jr.

SAB Geophysics Panel Recommendation on Magnetospheric Sounding and Free Electron Scatter Communication

In his memo of May 2 (copy enclosed), Chairman Smith asked that we become a working group to consider the above recommendation.

In his letter of 18 May 1963, (copy enclosed) Will Kellogg raised several excellent questions, which have now been answered (we hope) in Von Eshleman's memo of 29 May, which is also herewith enclosed.

May I accordingly solicit further comment from each of you? Is the wording of the proposed "action recommendation" in Paul Smith's memo satisfactory to all concerned? Are we in agreement that this is the action we would like to see taken?
